

Science Fair

Friday, February 4th.

Every Year our students in the k- 6th grade pick a friend and together, pick a Science experiment to work on.

They start by working on their science boards, rehearsing their lines, and experimenting with their Science project, hoping their hypothesis will be correct.

On the morning of the fair, everyone is excited! The experiments have been set up, lines have been learned and the students are ready to present their experiments in front of the judges and answer questions relating to their experiments. The judges get together after everyone is done and using strict judging criteria announce the winners.

The 1st place winners receive a Blue Ribbon and a Science Medallion, 2nd place, a red ribbon and 3rd place, a white ribbon. All students receive a ribbon for participating.

In the evening we invite all our parents to sit in the classrooms & watch proudly as their children present their experiments. It is great learning atmosphere!
